

Cloud Security Foundations (CSF)

Make your cloud journey safe and secure from the start.

OVERVIEW

Implementing the right foundational architecture at the beginning of your journey is a critical investment that will reap significant rewards in terms of speed and security. Onix's CSF solution provides guidance for both a secured foundational starting point and for customization to match specific business needs. This helps organizations plan, design, build and manage a reliable, secure and well-governed cloud foundation to help manage risk and achieve your business objectives.

BUSINESS OBJECTIVES

- An enterprise security solution to address identity & access management, network security, DevSecOps, data protection, and security monitoring (with SCCP).
- Makes it easy for organizations to enable security and lowers the adoption cost with a single solution package.
- Establishes a secure, standardized baseline environment (landing zone).
- Prescriptive guidance with packaged products that are aligned to Google Cloud security best practices and the Google Security Foundations Guide.
- Automation for deploying secure workloads in Google Cloud through IaC templates in a multi-project environment.
- Deploy and operate workloads in the new landing zone.

FOCUS AREAS

- Cloud-wide security posture management
- Vulnerability prevention and risk mitigation
- Supply chain protection
- Data security
- Web protection
- Compliance with various control frameworks, including HIPAA, FedRamp Moderate, and NIST
- Risk mitigation for intellectual property and business processes
- Guardrails for deploying secure applications
- Vulnerability management and threat monitoring (SCCP)
- Security and compliance scan of the GCP environment (up to 20 projects) after the deployment

Take the next step.
